

CV

Professional Skills

Web programmer

For several years I worked as a web programmer, where I primarily coded websites and web shops, based on Wordpress and Joomla CMS.

Frontender

From Photoshop to Website. Typical workflow is that I receive a design, which I then encode (HTML, CSS) on websites, while setting up special features such as. web shops, sliders or galleries that are also customized.

Middelender

Another area has been coding (PHP, jQuery, Bootstrap) frameworks-based templates and special plugins for primarily Wordpress, where usability is a keyword.

Outside of job

I have always been the helping hand when the family needs general computer help. I also assist my sister with her pottery web shop when she needs technical assistance.

Relevant work experience
